

Marlene H. Dortch Office of the Secretary Federal Communications Commission 445 12th Street, SW Washington, DC 20554

Reference: WC Docket No. 05-196; Compliance Letter

911 Solution:

Vision Systems, LLC, a South Dakota Limited Liability Company with business offices at 1016 Burdick Expressway East, Minot, ND 58701, provides Voice over Internet Protocol (VoIP) services to its subscribers at specific properties in four upper Midwest Markets (Apple Valley, MN; Des Moines, IA; Fargo, ND and Grand Forks, ND). Vision Systems, LLC currently provides 911 and E911 services to its subscribers to the best of its ability given available networks and the cooperation of its partnered CLEC or LEC provides in each market. To better provide such services and to assure full compliance with the Federal Communications Commission's June 3rd, 2005 order establishing enhanced 911 requirements for IP-enabled service providers, Vision Systems has partnered with Telefinity Dash911 to provide 911 calling services to its customers. Utilizing these Telefinity Dash911 services, on 11/28/2005 Vision Systems will be able to provide enhanced 911 calling services to 16.5% of our installed customer base. By the end of Q1 2006 (3/31/2006) the service will be available to 52.9% of all Vision Systems subscribers. At the end of Q2 2006 (6/30/2005) all subscribers in all of our markets will be covered. The low initial coverage percentage is due to the fact that Vision Systems mainly services small rural markets, which are on deferred schedules for 911 systems interconnects via Intrado and Telefinity.

The V9-1-1™ solution enabled by Telefinity Dash911 through Intrado provides a true E9-1-1 solution for VoIP Service Providers (VSP). The solution provided by the Telefinity Dash911 affiliation with Intrado enables a comprehensive approach to delivering E9-1-1 for VoIP by handling all aspects of the VoIP 9-1-1 call delivery and VoIP Positioning Center (VPC) functionality such as Master Street Address Guide (MSAG) Address Validation, ESQK management, Geocoding, real-time provisioning and routing determination. Included in the Service for the VSP is also the call delivery component to ensure the 9-1-1 call reaches the appropriate selective router and Public Safety Answering Point (PSAP). Specifically, Intrado manages the VPC functionality and the Call Delivery component on behalf of Telefinity Dash 911 thereby enabling VSPs to take advantage of a full end-to-end solution from one E911 service provider.

The only VSP requirements for delivery of the V9-1-1 service are the ongoing delivery of address and telephone number information to Telefinity Dash911 via a real-time interface and the PSTN connectivity to the Telefinity Dash911 network to enable live 9-1-1 call delivery. The real-time interface is via a SOAP API programming interface supplied by Telefinity Dash 911 to its VSP customers, or, a branded website interface provided by Telefinity Dash911 to its VSP customers.

o 911 Routing Information/Connectivity to Wireline E911 Network:

In our Apple Valley MN market we will be transmitting all 911 calls via the selective router network on 11/28/2005. In our Fargo, ND and Des Moines, IA calls are being manually transferred to the PSAP through and indirect arrangement with our CLEC partners. In all 3 of these markets representing over 88% of our customers we will be able to provide ANI and Registered location information either through Telefinity Dash911 or through the co-operation of our LEC and CLEC partners. We intend to route the remaining 12% of our customer base to the designated state wide answering point until such time (6/30/2006) as Telefinity Dash911 can provide service in the remaining market.

Currently through the assistance of our Network providers, each of Telefinity Dash911's VSP customers will have access to 154 E9-1-1 Selective Routers by November 28th, 2005 and the attached "Major Market Deployment Map" and the "VoIP Deployment Plan" reflects the major market deployment schedules. Note: the market deployment map represent major markets where Intrado has reported to Telefinity Dash911 that it has connectivity to at least 1 selective router, ALI steering and the ability to populate ALI.

Transmission of ANI and Registered Location Information:

Vision Systems will be be transmitting ANI and Registered location to 75% of the PSAPs in our service areas on 11/28/2005. The remaining 25% (consisting of 1 market area, Grand Forks ND) will be upgraded at such time as the Telefinity Dash911 is able to provide E911 service in that market, with an expected completion date of no later than 6/30/2006.

We have the ability to transmit ANI information to the PSAP via standard wireline service, and will be continuing to explore options in conjunction with our partners to have the registered location information updated in the ALI database. We will also be making alternate arrangements with the CLEC to ensure 911 call completion and correct Registered Location information delivery. Once Telefinity Dash911 is able to provide the complete package we will be standardizing this service.

- Basic PSAP: Currently 93% of the US population is served by PSAPs operating off an E9-1-1 Selective Router. To illustrate PSAPs within the US, which are not served by a Selective Router, the enclosed "Basic 9-1-1 PSAP" map could be used as reference information. While these areas are not included within the FCC Order and are not required for compliance, Intrado reports that they are actively contacting these areas to determine technical options for VoIP E9-1-1 native call delivery.
- ANI Only: There are unique deployment circumstances in areas of the US and Puerto Rico that operates off E9-1-1 Selective Routers, but will not meet the full FCC mandate. Telefinity Dash911 has indicated that Intrado has noted that there are currently four (4) States and a Territory that will have native Selective Routing functionality but will only provide Automatic Number Identification (ANI) only service to the PSAP. The following information explains the circumstances within these areas:

New Jersey - In the State of New Jersey Intrado <u>has</u> obtained permission from the State to deploy a voice-only service which includes the call-taker receiving ANI on the VoIP 911 caller. The State ALI system is not capable of full dynamic ALI updates and will require an upgrade. New Jersey represents 3% of the total US population.

Ohio - To date, Ohio has not granted permission to Intrado to deploy a voice-only solution. The State ALI system is not capable of full dynamic ALI update. Ohio represents 4% of the total US population.

Hawaii - To date, Hawaii has not granted Intrado permission to deploy a voice-only solution. The ALI systems serving Hawaii are not capable of full dynamic ALI update. Hawaii represents 5% of the total US population

Puerto Rico - To date, Puerto Rico has not granted permission to Intrado to deploy a voice-only solution. The ALI systems are not capable of full dynamic ALI update. Puerto Rico represents 3% of the total US population

The information regarding New Jersey, Ohio, Hawaii and Puerto Rico is included for reference purposes only as Vision Systems does not operate in any of these States or Territories.

• VSP Specific Metrics: <u>Please see enclosed VSP coverage Spreadsheet.</u>

o 911 Coverage:

Vision Systems has achieved full 911 compliance in three of four market areas covered as of November 28th 2005.

We have achieved compliance in the Fargo, ND, Des Moines, IA and Apple Valley MN markets either through our partnership with Telefinity Dash911 or through arrangements with our LEC and CLEC partners.

We have not achieved compliance in Grand Forks ND at this time. Telefinity Dash911 informs us that we can expect full compliance for this market no later than Q2 2006. We are also exploring a hybrid solution using Telefinity Dash911 to allow ALI and Registered location updates prior to that point while call routing is to be accomplished via arrangements with our CLEC partner in that market. If that is technically feasible it should be completed by January 1, 2006, failing the hybrid solution we expect a full Solution in conjunction with Telefinity Dash911 by 6/30/2006.

Deployment Overview – The Telefinity Dash 911 E911 solution uses Intrado as a backbone supplier and as such Intrado is the VPC and is working on nationwide native VoIP E9-1-1 delivery in accordance with the Commission Order. The initial PSAP deployments are targeted in major metropolitan areas throughout the US based on the VSP customer subscriber base priorities. The attached "Major Market Deployment Map", which corresponds with MSAs, identifies regions within our subscriber territory that have connectivity to at least one Selective Router, ALI steering capabilities; ANI and the ability to populate ALI. Telefinity Dash 911 has advised us that these areas are planned for deployments by November 28, 2005; March 31, 2006 and June 30, 2006. This intention of this map is to demonstrate FCC compliance for the November 28th requirements and the future deployment strategy.

Obtaining Initial Registered Location Information:

Vision Systems operates our Voice service in conjunction with video and data services. To activate service one of our employees is dispatched to each and every customer location as part of the initial

setup. Additionally we maintain a database of all physical customer addresses and all customer mailing addresses (where different) as part of our normal operations. Since we visit each customer as part of the setup process we have obtained registered location information for over 99% of our customer base.

Obtaining Updated Registered Location Information:

Telefinity Dash 911, as part of our total 9-1-1 solution, provides at least one way of updating each subscriber's Registered Location. As a component of the Telefinity Dash911 Service we have access to a near real-time address update system provided to us by Telefinity Dash911. This allows us to have near real-time delivery of the subscriber's address and also allows us as a VSP to submit a subscriber's address update information directly. The system allows us to have the subscriber input his initial address into the system at the time of initially signing up for our VoIP service. Addresses submitted are subjected to an immediate screening against the US Postal Service Street Address Guide in order to immediately determine if the submitted address is a valid address. VSPs may integrate VUI into their existing provisioning systems to ensure seamless delivery of acquired registered location information to the Intrado systems.

Subscribers have more than one option to input, update or change their address. Subscribers can easily and quickly update their Registered Location by either (a) online via our website, or (b) use the Telefinity Dash911 telephone touch tone (IVR) system to either select another pre-registered address that the subscriber may already have on file, or to ask for an operator who will make the address change while the customer is on the phone.

At the time of an emergency VoIP 9-1-1 call, Telefinity Dash 911 passes the call directly to Intrado's call routing system. Intrado's call routing system uses the customer's provisioned information to associate the latitude and longitude assigned during provisioning with the wireline PSAP boundaries maintained by Intrado to determine appropriate PSAP for delivery of the MSAG Valid Address and Call Back Number of the user.

Telefinity Dash 911 also offers to us, as a VSP a newly-released product called "Level of Service (LoS) Query" that we can choose to integrate into our application. This functionality enables us to make a real-time query with an address of a customer/end user for the purpose of determining the level of 9-1-1 service available to that customer based on their location. Intrado will return a set of responses (Enhanced, Basic, etc.) that will enable us or our user to determine the level of 9-1-1 service available at that address and take appropriate action.

In addition to the options Telefinity has made available above, Vision Systems customer service will have the ability to take change of information requests from our customers and process them on the customer's behalf after verifying certain personally identifiable information with the customer on the phone.

Technical Solution for Nomadic Subscribers:

At this time Vision Systems does not allow nomadic use of our services. We have taken preventive measures to ensure it is not used nomadically. Once all markets are using the Telefinity Dash911 service for 911 call completion we may re-evaluate this policy. At such time as we re-evaluate this policy the following statement would apply.

As a VSP using Telefinity Dash911's E911 for VoIP service, we are able to route VoIP emergency calls from our VoIP network to Telefinity Dash 911's Intrado Network or alternative 3rd party network for delivery to the appropriate Selective Router and then on to the geographically appropriate Public Safety Answering Point (PSAP) via the native 9-1-1 infrastructure. The Services utilized provide a "native" 9-1-1 solution for routing VoIP 9-1-1 calls

from both in-region and out-of-region telephone numbers (TNs) to the most geographically appropriate PSAP. The V9-1-1 solution enables full support of nomadic usage of VoIP provided the user updates their address information upon connecting to the Internet at a new location/address. Through the Telefinity Dash 911 interface, the 9-1-1 solution will enable the near real-time provisioning (Geocoding and MSAG Validation) of the newly-provisioned address and make available (assuming no errors) that particular user's information for delivery to the PSAP within an average of 15 minutes of receipt of the new Registered Location address information.

We recognize the universal desire to remove the user interaction and self-provisioning component of the current 9-1-1 solution. To that end, we understand that Telefinity Dash 911, along with Intrado, is actively working on a number of "location determinations" technologies.

Sincerely,

Randy L. Templeton, Vice President Vision Systems, LLC, Agent for ProVision, LLC and Valley Telecomm, LLC
